QUARTERLY REPORT TO 30 SEPTEMBER 2009

BUNNAWARRA JOINT VENTURE PROJECT (New Age to earn up to 40%) EL59/1391

A drilling program consisting of 1205 metres of aircore drilling was designed to test a rare earths, molybdenum, gold anomaly. Three lines of vertical drilling with holes spaced 50 metres apart, drilled to blade refusal were completed. The samples were composited down the hole to one sample for each 4 metre drill section.

Assays for Base Metals, Molybdenum, Gold, Silver, Arsenic, Rare Earths, Scandium, Cobalt, Manganese and Titanium were completed.

The molybdenum results reflected the surface anomaly and therefore no economic molybdenum grades were encountered. The gold and silver assays were lower than the surface anomaly. Drill hole BADAC33 returned anomalous results for rare earths from two composite samples. Above average abundances for the light rare earths cerium(Ce), lanthanum(La) and the element yttrium(Y) warrant further testing for the total rare earths in these samples. If subsequent assay results prove encouraging additional drilling will be considered.

The tenement is 18026 ha in area and has a number of gold, rare earths and base metal anomalies which remain untested. The joint venture participants will consider any such testing in the near future.
