

Quarterly Report

To 31 March 2020

New Age Exploration Limited ("NAE" or "the Company") is pleased to provide shareholders the Company's Quarterly Report for the period ending March 2019.

Highlights

New Zealand Gold Projects Lammerlaw and OPQ prepared for next stage on-ground exploration

- NAE's technical team has completed an interpretation of recently acquired airborne geophysical data to define priority targets for the next field exploration programme.
- A structural and lithological interpretation of high resolution airborne resistivity and magnetics has been completed on behalf of NAE by APSAR Ltd, geological consultants based in Otago, NZ. The results highlight significant areas of interest for potential Macraes style gold deposits
- The projects are prospective for Macraes style gold deposits based on research by MacKenzie & Craw in 2016 which identified a 'mirror image' in the south of the Otago Schist belt (within the Permits) of the geology present in the north of the schist belt some 60km away which hosts the >10Moz Au Macraes gold mine within the Hyde Macraes Shear Zone ("HMSZ").
- The Permits contain historic gold and scheelite workings with minor occurrences of copper, silver and mercury. A historic antimony lode also exists to the north.
- The prospective Lammerlaw Prospecting Permit strengthens NAE's position in Otago which includes the adjacent OPQ Exploration Permit 60502 where gold exploration is already well progressed and a significant gold soil anomaly has been defined over the historic OPQ gold mine.
- The follow up exploration programme will include mapping, soil and rock chip sampling, which is planned to commence after current working restrictions due to COVID 19 are lifted.

Redmoor Transaction

- The first two of three \$300,000 quarterly payments were received in October 2019 and January 2020 for the sale of NAE's 50% share of the Redmoor Tin-Tungsten Project to Strategic Minerals Plc ("SML") for a total consideration of \$5.0m. The next \$300,000 quarterly payment is due on or before 30 April 2020.

Corporate

- \$854K cash at 31 March 2020, with \$300,000 quarterly cash payments expected at the end of April 2020 and \$1.8M final payment expected at the end of June 2020 from the Redmoor transaction.
- This will place the company in a strong financial position enabling it to focus on advancing its gold exploration projects in Otago, NZ and strengthening efforts to acquire new opportunities which establish shareholder value moving forward.

Targets for June Quarter 2020

- * Subject to the lifting of COVID19 restrictions in New Zealand NAE intends to complete the following activities:
 - OPQ Gold Exploration Project (EP 60502) - a Phase 2 exploration program comprising of drilling (~20m deep holes) and trenching over the OPQ gold target is planned to be undertaken in 2020 to follow up on the encouraging Phase 1 results received in December. A follow up Phase 3 program, comprising of deeper RC and/or diamond drilling (>50m deep holes), is also planned later in 2020 subject to the results of Phase 2.
 - Lammerlaw Prospecting Permit (PP 60544) - An initial work program is planned on the Lammerlaw Prospecting Permit in 2020 following the recent encouraging results of the geophysical report completed by ASPAR Ltd. The programme will comprise of targeted mapping, soil and rock chip sampling in combination with NAE's planned further exploration on the adjacent OPQ gold target.
 - Continue to search for new value adding project opportunities.

Activities

OTAGO PIONEER QUARTZ GOLD EXPLORATION PROJECT (EP 60502)

Location of NAE Gold Permits in Otago, New Zealand

In January 2019, NAE was granted a 71.6km² Exploration Permit (EP 60502) covering the Otago Pioneer Quartz (“OPQ”) Gold Target located in the Mahinerangi area of Otago, New Zealand.

In December 2019, NAE was also granted a 265.4km² Prospecting Permit (PP 60544) in the prospective Lammerlaw area adjoining the OPQ Exploration Permit to the north-west.

Figure 1- NAE Permits in Otago New Zealand

REVIEW OF GEOPHYSICAL DATA ON LAMMERLAW AND OPQ PERMITS

NAE commissioned a report by Anthony Coote, (APSAR Ltd) to examine regional geophysical and other data in March 2020 in the Lammerlaw and OPQ permits. The report covered reviews of;

- magnetic and EM airborne geophysics flown by Fugro Ltd for Glass Earth NZ Ltd in 2007,
- geology, structure and petrology
- previous geochemical sampling including soil sampling, stream sediments and drilling

Priority targets for exploration were identified and exploration recommendations produced.

These included;

- targeting contacts between contrasting metamorphic rocktypes comprising carbonaceous pelitic schists overlying psammitic mafic schists. These areas are identified by sharp boundaries between high and low response on airborne EM surveys (see figure 2). These contact zones preferentially host mineralised shearing and veining in other deposits in Otago.

Figure 2 - Target areas on airborne resistivity

For personal use only

Figure 3 - Conceptual cross section Lammerlaw permit

GOLD EXPLORATION TARGETS

The regional geology is dominated by the Otago Schist belt, a high-grade metamorphic schist, which has a long history of both hard rock and alluvial gold mining. The Otago Schist is divided into structural blocks or zones of increasing metamorphic grade known as; Sub-Greenschist Facies, Lower Greenschist Facies, Upper Greenschist Facies and Amphibolite Facies. Gold mineralisation at the >10Moz Au Macraes deposits, hosted in the Hyde Macraes Shear Zone (“HMSZ”), occurs entirely within the Lower Greenschist Facies zone in the northeast of the Otago Schist belt (see Figure 4).

For personal use only

Figure 4 - Geological Map - Shear Zone Hosted Gold Mineralisation within the Otago Schist Belt

MacKenzie and Craw (2016) identified the potential for Macraes style shear zone hosted gold deposits to occur in the southern part of the Otago Schist belt within the Lower Greenschist Facies zone, inside the Permit area. These southern shear zone gold exploration targets have been identified as being a ‘mirror image’ of the geology present in the northern margin of the Otago Schist belt (approximately 60km to the northeast) containing the Hyde Macraes Shear Zone (“HMSZ”) which hosts the Macraes gold mine (>10 Moz) (See **Error! Unknown switch argument.**).

Gold mineralisation such as that found along the HSMZ on the northeastern side of the Otago Schist belt may therefore also be present on the southwestern side of the Otago Schist belt within the Permit. This concept is shown in the schematic cross section in Figure 5 which also highlights conceptual southern shear zone gold exploration targets.

Figure 5 - Geological Cross section - Otago Schist Belt & Southern Shear Zone Gold Exploration Targets

COMPARISON WITH MACRAES GOLD DEPOSIT

The Macraes gold deposit, including the Frasers Open Pit and Underground mine, is the largest gold mine in New Zealand and has produced more than 4 million ounces of gold since opening in 1990. It has a current mineral resource of over 6 Moz making the deposit >10 Moz in total. The Macraes mine is developed in a regionally continuous shear zone known as the Hyde Macraes Shear Zone (“HMSZ”). The HMSZ is up to 150m thick and dips at approximately 20° to the northeast.

The mineralised HMSZ and associated cross faults correlate with conductivity highs from an airborne geophysical survey flown for Glass Earth NZ Ltd in 2007.

Conductivity lineaments may therefore be used as a tool to help identify the occurrence of potentially mineralised shear zones in the ‘mirror image’ geological setting within Lower Greenschist Facies target zone in the southern part of the Otago Schist belt within the Permit.

HISTORIC GOLD MINING

The Permit contains the historically mined Bella Lode where gold was mined in the late 1800’s with an average grade of 15 g/tonne Au over 0.6-1.8m thickness, before the mine closed in 1901. The Permit also contains a historically mined antimony lode along and scheelite (tungsten) workings with minor occurrences of copper, silver and mercury.

New Zealand’s largest alluvial gold deposit, Gabriels Gully (>0.5 Moz produced), is located approximately 3km directly to the south of the Permit the source of the gold remains unidentified.

PLANNED WORK PROGRAM

The culmination of the geological setting being analogous to the Hyde Macraes Shear Zone, the presence of conductivity lineaments similar to the Hyde Macraes Shear Zone to target exploration, the close proximity of New Zealand’s largest alluvial gold deposit (Gabriels Gully), and historic gold mines being located on the Permit make it particularly prospective for gold exploration.

For personal use only

A follow up exploration program will commence after current work restrictions due to COVID 19 are lifted. Initial fieldwork will focus on geological mapping soil sampling and rock chip sampling. Priority soil sampling lines are shown in dashed blue lines on figure 5.

Figure 6 Planned Soil Sampling Lines shown in blue dashed lines

LOCHINVAR COKING COAL PROJECT, UK

The Lochinvar Coking Coal Project is located on the Scottish / English border. NAE holds exploration licences, conditional mining licences and option agreements over the Lochinvar area, Lochinvar North area and Lochinvar South area as shown in Figure 1. All licences are in good standing and are 100% owned by NAE.

For personal use only

Figure 7- Location of the Lochinvar Licences

Lochinvar Mineral Resource¹

A Total Resource of 111 Mt has been defined by independent technical consultants, Paralis, for the Nine Foot and Six Foot Seams within the Lochinvar licence as shown in Table 1.

Table 1 - Lochinvar Indicated and Inferred Resource Summary (August 2014)

Coal Seam (Air Dried Basis)	Indicated Resource (Mt)	Inferred Resource (Mt)	Total Resource (Mt)
Nine Foot Seam	37	49	86
Six Foot Seam	13	13	26
Total	49	62	111

¹ NAE announcement 29 August 2014, Lochinvar Resource Upgrade and Product Quality

For personal use only

An additional Exploration Target of 31 – 64Mt was also identified by Palaris within the Lochinvar and Lochinvar South Licences¹.

The potential quantity and quality of the Exploration Targets is conceptual in nature. Insufficient exploration has been undertaken to estimate a Mineral Resource and it is uncertain that further exploration will result in the estimation of a Mineral Resource.

Lochinvar Scoping Study

In March 2017, NAE announced the results of an update of the Lochinvar Scoping Study, which showed a base-case NPV 9%, determined to an accuracy of $\pm 40\%$, of approximately US\$410M, an IRR of approximately 27% and a payback period of approximately 4 years for the project. The study also demonstrated that the Lochinvar Project is robust to changes in Coking Coal price and other key assumptions (break even HCC price is US\$100/t). The economic evaluation was based on a US\$160/t HCC Benchmark Price / US\$150/t Lochinvar realised Price.

The Lochinvar Scoping Study results show the potential for the project to deliver excellent returns on investment with lowest quartile operating costs resulting from short rail transport distances, low labour costs, high coal yield (71%), low royalties, and low taxes.

Lochinvar sits comfortably in the lowest quartile of the 2017 Wood Mackenzie Global Seaborne Coking Coal FOB cost curve. With a total FOB Operating Cost of US\$58/t, Lochinvar has the potential to deliver a low-cost, long life operation which is ideally located to supply the European steel industry.

Lochinvar North Exploration Target

In addition to the coking coal resource contained within the Lochinvar Licence, upon which the Scoping Study is based, the adjoining Lochinvar North licence (granted to NAE in April 2019) and Lochinvar South licence also contain significant coking coal exploration targets.

Localised coal mining occurred within the Lochinvar North licence area from the mid-1800's to the early 1920's in the eastern part of the coalfield, where the coal seams are exposed near the surface.

In the 1950's, 5 boreholes were drilled by the National Coal Board within the Lochinvar North licence area. 4 of these boreholes intersected the Nine Foot Seam and/or the Six Foot seam confirming the continuity of coking coal seams within the Lochinvar North licence with an average thickness of 4.1m for the Nine Foot Seam and 1.8m for the Six Foot Seam, and similar coal quality to that recorded in the Lochinvar licence. These intersections show a thickening of the coal seams, when compared to the adjacent Lochinvar licence.

Exploration data from NAE's adjacent Lochinvar licence, combined with historic borehole and seismic data over the Lochinvar North licence provided the basis for an Exploration Target over the Lochinvar North Licence. In April 2019, soon after NAE being granted the licence, an Exploration Target for the Lochinvar North licence ranging from 77-142 million tonnes was estimated by independent technical consultants, Palaris, in the Nine Foot and/or Six Foot Seams to a maximum depth of 1,000m and minimum thickness of 1.2 m.

For personal use only

Lochinvar Bord & Pillar Mining Potential

In September 2019, an optimisation study on the Lochinvar Project was completed by technical consultants, Palaris. The study identified the following opportunities for improvement:

- Opportunity to reduce ventilation shaft construction cost based on revised contractor quotes
- Opportunity to reduce costs of initial underground roadway development to reach first longwall mining panel based on updated estimates by Palaris
- Addition of a single Bord and Pillar mining panel to produce salable coal during the 2-year project construction period and prior to coal production from the first longwall panel.

The optimisation study also highlighted the potential for extended use of Bord and Pillar underground mining method at Lochinvar:

- Expected Bord and Pillar mining costs at Lochinvar appear to be competitive with other international Bord and Pillar underground coal mining operations benchmarked by Palaris.
- Bord & Pillar mining expected to be possible at Lochinvar to depths less than 400 m from the surface where geotechnical conditions are typically more benign than at greater depths.
- 33³ Mt of the total Lochinvar coking coal resource in the Nine Foot seam is between 200 m and 400 m deep and has potential to be mined via the Bord and Pillar underground mining method. Of this, 21.2 Mt is in the Indicated Resource category and 11 Mt is in the Inferred Resource category⁴.
- The Exploration Target within the Lochinvar North licence may also offer potential for Bord and Pillar mining, subject to further exploration and confirmation of resources.
- Although the Bord and Pillar mining method is slightly more expensive than the longwall mining method, it has a number of significant advantages including; significantly lower start-up capital costs, increased flexibility to accommodate faulting and geological structure encountered in mining and to manage coal quality variation within the deposit, and, increased ability to scale production rate to meet market demands by adding/removing continuous miner units.
- NAE now plans to further study the potential for an extended Bord and Pillar underground mining operation at Lochinvar, prior to the commencement of longwall mining.

Renewal of Lochinvar South Licences

In October 2019, NAE's Lochinvar South exploration licences, conditional mining licences and option agreements were renewed for a further 5-year period to October 2024 by The Coal Authority.

REDMOOR TRANSACTION

In July 2019, a transaction was completion to sell NAE's 50% share of the Redmoor Tin-Tungsten Project, located in Cornwall, United Kingdom to Strategic Minerals Plc ("SML") for a total consideration of \$5.0m as follows:

³ Subject to rounding

⁴ NAE Announcement, 29 August 2014: Lochinvar Resource Upgrade and Product Quality

For personal use only

- \$3.0m in cash payments between June 2019 and June 2020 payable as follows:
 - Initial payments totaling \$300,000 completed in June and July 2019
 - The first of three \$300,000 quarterly payments was received in October 2019 (increasing the total paid to date to \$600,000). The two remaining \$300,000 quarterly payments are due on or before 31 January 2020 and on or before 30 April 2020
 - \$1,800,000 payment due on or before 26 June 2020
 - 5% p.a interest payable on outstanding payment balance from 26 July 2019
 - Payments secured by charges over CRL shares and property and an NAE option to convert any outstanding balances due to SML shares at a 10% discount to market price in the event of default
- \$2.0m in royalty payments payable as follows:
 - \$1,000,000 on Net Smelter Sales arising from Redmoor production reaching A\$50m
 - \$1,000,000 on Net Smelter Sales arising from Redmoor production reaching A\$100m

The Redmoor sale transaction is expected to provide the Company with over \$3.0m cash inflow from the transaction over the 12-month period from June 2019 to June 2020. This will place the company in a strong financial position enabling it to focus on advancing its gold exploration projects in Otago, NZ and strengthening efforts to acquire new opportunities which establish shareholder value moving forward.

CORPORATE

Strategy

Finalisation of the Redmoor sale transaction has provided the Company with an expected \$3.0m cash inflow from the transaction over the 12-month period from June 2019 to June 2020. This will place the company in a strong financial position enabling it to focus on advancing its gold exploration projects in Otago and strengthening efforts to acquire new opportunities which establish shareholder value moving forward.

The Company will continue to progress opportunities for funding of the Lochinvar Project with interested parties during the June quarter.

The Company will continue its search for new value adding opportunities, leveraging off its stronger financial position post 30 April 2019.

Released with the authority of the Board.

Joshua Wellisch
Director

COMPETENT PERSONS STATEMENT

LOCHINVAR

The Resources estimate is based on information compiled by Dr John Bamberry, who is a Member of the Australasian Institute of Geoscientists (Member No. 4090). Dr Bamberry is the Principal Geologist at Palaris. He has sufficient experience relevant to the style of mineralisation and type of deposit under consideration and to the activity he is undertaking to qualify as a Competent Person, as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Dr Bamberry has over 25 years' experience in exploration and mining of coal deposits.

Neither Dr Bamberry nor Palaris have a direct or indirect financial interest in, or association with New Age Exploration Ltd, the properties and tenements reviewed in this report, apart from standard contractual arrangements for the preparation of this report and other previous independent consulting work. In preparing this report, Palaris has been paid a fee for time expended based on standard hourly rates. The present and past arrangements for services rendered to New Age Exploration Ltd do not in any way compromise the independence of Palaris with respect to this review.

OPQ GOLD EXPLORATION PROJECT AND LAMMELAW PROSPECTING PERMIT

The information in this report that relates to Exploration Results is based on information reviewed by Kyle Howie, who is an exploration geologist and is a Member of the Australian Institute of Geoscientists. Kyle Howie has over 25 years experience in precious and base metal exploration and resource calculation including gold exploration and resource definition in the Otago region. Kyle Howie has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Kyle Howie consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

FORWARD LOOKING STATEMENTS

This report contains “forward-looking information” that is based on the Company’s expectations, estimates and forecasts as of the date on which the statements were made. This forward-looking information includes, among other things, statements with respect to the Company’s business strategy, plans, objectives, performance, outlook, growth, cash flow, earnings per share and shareholder value, projections, targets and expectations, mineral reserves and resources, results of exploration and related expenses, property acquisitions, mine development, mine operations, drilling activity, sampling and other data, grade and recovery levels, future production, capital costs, expenditures for environmental matters, life of mine, completion dates, commodity prices and demand, and currency exchange rates. Generally, this forward-looking information can be identified by the use of forward-looking terminology such as “outlook”, “anticipate”, “project”, “target”, “likely”, “believe”, “estimate”, “expect”, “intend”, “may”, “would”, “could”, “should”, “scheduled”, “will”, “plan”, “forecast” and similar expressions. The forward looking information is not factual but rather represents only expectations, estimates and/or forecasts about the future and therefore need to be read bearing in mind the risks and uncertainties concerning future events generally.

SUPPORTING INFORMATION AND CAUTIONARY STATEMENTS

This presentation has been prepared as a summary only, and does not contain all information about NAE’s projects or its assets and liabilities, financial position and performance, profits and losses, prospects, and the rights and liabilities attaching to NAE’s securities. The securities issued by NAE are considered speculative and there is no guarantee that they will make a return on the capital invested, that dividends will be paid on the shares or that there will be an increase in the value of the shares in the future. NAE does not purport to give financial or investment advice. No account has been taken of the objectives, financial situation or needs of any recipient of this report. Recipients of this report should carefully consider whether the securities issued by NAE are an appropriate investment for them in light of their personal circumstances, including their financial and taxation position.

7.6 Include in the box below a description of each facility above, including the lender, interest rate, maturity date and whether it is secured or unsecured. If any additional financing facilities have been entered into or are proposed to be entered into after quarter end, include a note providing details of those facilities as well.	

8. Estimated cash available for future operating activities	\$A'000
8.1 Net cash from / (used in) operating activities (Item 1.9)	(131)
8.2 Capitalised exploration & evaluation (Item 2.1(d))	(9)
8.3 Total relevant outgoings (Item 8.1 + Item 8.2)	(140)
8.4 Cash and cash equivalents at quarter end (Item 4.6)	854
8.5 Unused finance facilities available at quarter end (Item 7.5)	-
8.6 Total available funding (Item 8.4 + Item 8.5)	854
8.7 Estimated quarters of funding available (Item 8.6 divided by Item 8.3)	6.1

8.8 If Item 8.7 is less than 2 quarters, please provide answers to the following questions:

1. Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?

Answer:

N/A

2. Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?

Answer:

N/A

3. Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?

Answer:

N/A

Compliance statement

- 1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.
- 2 This statement gives a true and fair view of the matters disclosed.

Date: 29 April 2020

Adrien Wing – Company Secretary

Released with the authority of the Board

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [name of board committee – eg Audit and Risk Committee]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
